
PROJECT REPORT

COURSE TITLE: Digital Literacy

COURSE CODE: CSE0001

Branch: B.Tech in Bioengineering

Name: Grishmi Halai

Reg No. 25BOE10156

INTRODUCTION:

In today's digital world, having basic digital literacy skills is essential for students. This project was designed to help us understand how to use digital tools effectively and responsibly. As part of this assignment, I took on the role of a Student Digital Ambassador and worked on different tasks that focused on online safety, professional presence, communication, and awareness of cyber threats. Through this project, I explored various platforms and tools that are useful for both academic and professional growth.

Task-1: Creating a Digital Literacy Awareness Infographic

I have created the Infographic using the graphic design tool Canva. My Infographic is based on the topic Digital Literacy For Students. It includes important topics that should be followed and effectively practised by the students who are digitally active. I have briefly explained about what is digital literacy, to make the students familiar with my presentation. Then I have mentioned the digital tools that are useful for students. Continuing with informing them about safe internet practises the students should follow. And lastly, I have included email etiquettes that should be practised.

I found it interesting to use different templates, style and graphics while designing this infographic. It was fun creating it and learning something new.

One challenge that I faced was that aligning the layouts properly as per the information to be included. I also had difficulty in adjusting the font size according to the layout.

Overall, this task helped me present information visually and precisely to the point.

Task-2: Build Student Digital Portfolio

For this task, I created profiles on three professional platforms — GitHub, Kaggle and LinkedIn. I filled in the basic details like my branch, year of study, and educational background. Honestly, I had heard about these platforms before but never actually used them, so this was my first time properly setting them up.

I now understand that GitHub isn't just for storing code — it's how you show people what you've actually built. And LinkedIn is more than just an online resume; it's where real professional connections happen. In Kaggle is a good platform to learn data science.

As I work on more projects, I would upload them to GitHub so they're visible to anyone who looks me up. On LinkedIn, I hope to start connecting with seniors, alumni, and professionals in my field, and eventually use it to find internship opportunities.

This task felt small, but it genuinely felt like a first step toward something bigger — building a professional identity that actually represents me.

Task-3: Explore Coding & Collaboration Platforms

For the completion of Task-3, I came across using HackerRank, For Part-A of the Task. I solved a Basic beginner problem. In the start it was quite confusing using the platform. Then, as I got used to it, I found it more interesting and easier to practise my skills here. It helped me write my codes in a logical and structured manner.

Then For Part-B, I learnt how to create a Google Form as a Quiz on Digital Literacy Awareness. It was a bit fun creating the questions. I got to know how the responses of the quiz are collected automatically and they can also be viewed in Google Sheets. This was new to me.

Overall, I learned many new things from solving codes in HackerRank to creating Google Form. These skills would eventually be helpful in my future projects and in practicing codes. It will also help me in my recent academic years.

Task-4: Draft a Professional Email & Etiquette Guide

When a Club missed Two Weeks Due to a Misread Email

Once, the club president emailed the team to inform them that the event deadline had been changed. No other information was provided in the email by the president.

The club members in the university slowed down because half of them thought it meant delayed. While the others panicked and started completing the tasks in hurry, unseeing the details, just to complete it on time. This is because they thought the deadline was preponed. There was no further communication by the president regarding the change of deadline. Also, no communication between the teams of the club was made. The confusion was cleared during a check-in call two weeks later. The work needed to be redone. The event was postponed, as No tasks were managed properly for the event.

There would not have been so much confusion if the president had given the new fixed date of the event. The event would have occurred smoothly and on time.

Task-5: Cybercrime Awareness Case

Study & Prevention Guide

This task was about studying a cybercrime case and putting together a prevention checklist based on it. Going into it, I thought I already had a fair idea of how online fraud works — but researching it properly was a bit of an eye-opener.

The part that genuinely caught me off guard was just how common phishing and payment fraud actually are. It's not something that only happens to people who are careless or unaware — these scams are designed to fool almost anyone. Some of the case examples I came across were surprisingly convincing, and I found myself thinking "I might have fallen for that too."

After working on the checklist, I've become a lot more mindful about small habits — like double-checking a link before clicking it, not saving card details on random websites, and being sceptical when something feels slightly off. It's the kind of awareness that sounds obvious in theory but only really clicks when you actually sit down and study real cases.

Overall, this task changed how I think about my own online behaviour, which I wasn't really expecting from a checklist assignment.

Conclusion :

Overall, this project was a valuable learning experience. It helped me understand the importance of digital literacy and how it applies to everyday life. I explored various tools and platforms that will be useful throughout my academic journey. This project also improved my awareness of online safety and professional communication. I believe the skills I learned will help me become a responsible and informed digital user.
